

Gardens by the Bay

## Gardens by the Bay

### Objectives

- In order to create a perfect environment for visitors to enjoy the gardens, the developer required a fully integrated system that encompasses security surveillance, public address, smoke control and a building management system.
- Installation came as a challenge in some areas due to the unique building structures in the gardens. In addition, there was a lot of emphasis on the overall aesthetics of the place. Cameras and speakers had to be integrated and concealed into its surroundings.

### Highlights

- Working with the criteria set out by the developer, the Bosch Security solutions team came up with a fully integrated system which would address the concerns of the developer. This included the installation of 192 cameras (NDC455, VG4 and VG5 series), 1,312 speakers under the Praesideo series, a Building Integration System, 3 FPA5000 Panels and 100 Optical and Heat Detectors throughout the entire compound.

### Customer benefits

- The developer was not only amazed with the low maintenance cost, and the ease in operating the system, but was also pleased with the post-installation support provided by the Bosch security solutions team.
