Punna Residence, Thailand

Objectives

- In order to create a community that will allow the residents to enjoy comfort, convenience, and safety in their lives, Punna Residence required fire alarm systems that can provide accurate and reliable fire detection and notification.
- integrated control panel across all buildings within the compound. This would significantly reduce the manpower needed to manage the fire alarm system.

Highlights

- Taking the requirements and budget into consideration, a scalable solution was proposed. This included the installation of a FPA 5000 Fire Alarm Control Panel and Power Supply Unit, FAP-O 420 LSNi Optical Smoke Detector, FCP-O320 Optical Conventional Detector and F220-135 Electronics Heat Detector. Reliable fire alarm system, ensuring the safety and assets of residents

Customer benefits

- Integrated solution which provides Punna Residence at CMU with central fire alarm system control and peace of mind
- Reliable fire alarm system, ensuring the safety and assets of residents
- Strong after-sales service from the Bosch Security Systems partner
